

Compression Stockings Application and Care

Putting your stockings on at the start of your day, before swelling starts, is best. The use of gloves is recommended to make the process easier. Dish gloves work just fine.

Gathering the stockings prior to donning is not recommended, as this makes it difficult to put them on. Do not pull from the top band. The goal when putting on stockings is to get the heel in place as easily as you can.

Application

1. Fold the stocking over once down to the heel, so that the length of the stocking is shortened in half. This will help get your foot and heel in place more easily. Remember, do not bunch or gather the stocking.
2. Insert foot and gently pull until you meet resistance as you secure the foot.
3. If your stocking doesn't go entirely on the foot, use your donning gloved to gently move the fabric in an upward direction. Once the heel is in place, you can gently move the stocking in an upward motion to its full length. Use your donning gloved to smooth out any wrinkles. The top band should be approximately 2 fingers width from the top of the leg.

For Pantyhose

Secure each foot in place: then, using the donning gloves gently move the stocking up each leg in short, alternating movements, securing the panty in place.

Removal

1. Remove stockings before going to bed, unless otherwise indicated by Dr. Eidson and his care team. (Exception: the stocking must be worn overnight the 1st day of your endovenous procedure).
2. Use donning gloves to make stockings removal easier. Take hold of the stockings at the top band and peel downwards past the ankle. Never push downward, as this created bunching and makes the stocking more difficult to remove.
3. With the palm of the hand, work the stocking over the heel and remove.

Stockings with silicone band (Thigh High)

For optimum performance of the silicone band, you may want to wipe it regularly with a clean cloth moistened with rubbing alcohol. This will remove skin oils and lint from clothing that could decrease the effectiveness of the silicone keeping your compression in place.

Washing Compression

You can wash your compression stockings by hand or in a washing machine. Wash on delicate with cold water and a mild detergent. DO NOT dry in a dryer as this can ruin the compression. Hang dry your compression stockings.

Calf High Compression: Same basic instructions for putting on and taking off compression. No specific changes.

Donning and Doffing (Putting on and Taking off) assistance devices can be purchased online if needed.

Important: Sharp fingernails, rings, and bracelets may cause damage when putting on and removing the stockings. Do not cut or pull loose ends, which sometimes appear on the inside of the stockings.
